Education

University of Delhi, Faculty of technology

Oct 2023 - June 2027

Bachelor of Technology in Computer science & Engineering, Specialization in AIML

New Delhi, Delhi

Technical skill

Languages: C++, C, JavaScript, TypeScript, Python

Frontend: React.js, Next.js, Redux, HTML, CSS, Tailwind CSS

Backend: Node.js, Express.js, Flask, FastAPI, REST APIs, Microservices, RabbitMQ, JWT, WebSocket, WebRTC

AI/ML: Neural Network, PyTorch, FFNs, CNNs, RNNs, Transformers, NLP, Agentic AI, Langchain, LangGraph

Databases: SQL, MongoDB, SQLAlchemy, Mongoose, Supabase

Cloud & Tools: AWS (S3, Lambda, EC2), Git, GitHub

Core concepts: Data Structures & Algorithms, Object Oriented Programming, DBMS, Computer Networks, System Design

Work Experience

Appeneure Technologies

June 2025 - May 2026

React Developer Intern

Noida, India

- Developed **reusable and modular React.js components** to build scalable, responsive, and maintainable user interfaces.
- Integrated **RESTful APIs** for efficient client-server communication, dynamic data rendering, and seamless frontend-backend integration.
- Developed and optimized Chrome Extension features using React.js, reducing UI rendering latency and improving user experience across **100+ users**.
- Debugged and resolved **UI and API integration issues** while collaborating through **Git, code reviews, and standard software development workflows**.

Projects

AI Email Agent | LangChain, LangGraph, Prompt Engineering | [GitHub](#)

June 2026

- Designed a modular LangGraph workflow integrating Gmail, Google Calendar, and web-search APIs for context-aware email processing.
- Implemented human-in-the-loop approval for LLM-generated responses before email delivery.

PlayDeck | React, TypeScript, FastAPI, WebSockets, Redux Toolkit | [GitHub](#)

Jan 2026

- Developed a real-time multiplayer gaming platform using React and FastAPI, enabling users to connect mobile phones as wireless controllers for browser-based games.
- Engineered WebSocket-based room management and real-time event broadcasting for synchronized multiplayer interactions across connected devices.

Attention-Based Image Captioning Model | CNNs, RNNs, Next.js, FastAPI | [GitHub](#)

Nov 2025

- Developed an image captioning model using CNN and Attention mechanisms to generate context-aware descriptions from images.
- Achieved **85%+ semantic accuracy** by focusing attention on relevant image regions during caption generation.

AI-Based Grievance Management System | React.js, Flask, SQLAlchemy, Whisper | [GitHub](#)

April 2024

- Built an AI-driven grievance management platform using **Microservices Architecture** and NLP-based complaint classification.
- Achieved **90%+ classification accuracy** and **70% faster grievance routing** through automated complaint analysis and prioritization.

Notable Achievements

- Solved **700+ DSA problems** on **LeetCode** using **C++**, strengthening expertise in algorithms, data structures, and problem-solving
- Secured **1st place** in the **CodeFOT Data Structures & Algorithms Competition**, conducted by **IEEE**.
- Achieved a top **10% ranking** among **1,000+ teams** at **DTU Execute 4.0 Hackathon** through the development of a practical and scalable technology solution.
